

Aero-Glide

Product Description

One-Step Dry Wash, Polish & Friction Reducer. This waterless dry wash is specially formulated with a blend of deep cleaners and light oxidation removers to provide a true one-step cleaning, detailing and polishing solution that leaves a high gloss protective finish on aircraft and other vehicles. Aero-Glide's hard protective coating reduces surface friction and exhaust stains.

- Easy on, easy off. No water necessary
- We recommend to wash the vehicle prior to use if there is sand, concrete or other abrasive compounds present.
- Removes light surface oxidation on most finishes
- Provides mid-term (approximately 3-4 month) protection against UV, exhaust soot and other grime

Meets Airline Certifications:

- ASTM F-484-77
- ASTM F-519
- AMS 1650
- ASTM F-502
- BOEING D6-17487 Rev. H

Application Suggestion

- For cleaning and improving surfaces of aircraft, classic cars, motorhomes, caravans and agricultural machinery.
- Garage doors, roller gates
- Trucks and heavy machinery
- Handling equipment like fork lifts, pallet movers, shelving and scales

Direction of use

Aero-Glide is very simple to use. Apply either directly onto the surface to be cleaned or pour a small amount onto a cloth and wipe on. Any soft, lint free cloth will work fine. Microfiber rags or stockinette/cheese cloth and applicator pads are excellent for this purpose.

Wipe away dirt and grime. Make sure to always use a clean portion of the cloth. For light surface oxidation, apply either by hand or with a random orbital buffer using moderate pressure and medium speed only.

As you wipe away dirt, grime and exhaust, Aero-Glide will leave a bright, lustrous, brilliant shine

Removal of excess:

Wipe off excess with dry cloth or wash off with water.

Safety brief / precautions

Wear gloves if you have sensitive skin. Use eye protection when using a buffer.

Keep away from children. Do not swallow product.

Please see SDS sheet for full safety brief.
